SUMMARY

I have one year of experience working as a Front-end Engineer at a Software House company. I am responsible for the analysis, creation, and development of front-end applications. I work together in a team of 2 people. Using React, I designed and created an application interface for my team and integrated it using a RESTful API that returns a JSON payload. Sometimes, I also work as a Full-stack developer in my company. Through unit testing, the team has achieved 90% completion of each project.

TECHNICAL SKILLS

- React Typescript
- JavaScript
- TypesScript
- HTML
- Tailwind CSS
- Bootstrap CSS
- Vue JS
- PHP Laravel
- Figma

PROJECTS

- **Emergency CallCenter Indonesia (ECCI) Apps**: ECCI is an emergency call application for people who need help, especially those who need ambulances, police, firefighters, SAR, and transportation services. This application was created with React TS as the display (UI/UX), Golang & Node JS as the data manager, and Speech To Text and Google Maps API in creating this application. See the source on GitHub.
- **HRIS - Apps**: This application makes it easier for a company to record data on each employee, including absences, sickness/permits, and reimbursement requests. I used React TS to build this application, the database uses MySQL, and the backend uses Golang and Node JS. See the source on GitHub.
- **Udberkah - Online Shop**: Sells various daily necessities, whether food, drinks, or other needs. I work on both frontend and backend using Laravel, react, and MySQL as the database. This application is also integrated with Midtrans for making payments.
- **Other projects**: In my company, I work on applications for related agencies in my area, such as the South Sulawesi Provincial Transportation Service, the Manpower and Transmigration Service, and services for several schools using Laravel and React.

WORK EXPERIENCE

PT. Liny Jaya Informatika   Apr 2022 - Now
Fullstack Developer

In my company, I do work including:
- Analyze the system to be created and design the design interface of the system
- Create an application based on the design above as Frontend and Backend
- Present the application to the client

EDUCATION

Alterra Academy   June - Oct 2023
Immersive Program, Frontend Engineering

- Immersive Frontend Engineering Program is a 3-month intensive program designed to train future frontend engineers in the fundamentals of software development.
- This rigorous 5-day-a-week program has a well-documented history of developing the best software engineers.
- Courses: Pair Programming, HTML/CSS, Git, Github, Gitflow, React.js, Redux, Test Driven Development, Deployment.
- Capstone Project: Creating HRIS-App and ECCI applications with React TS

Buildwithangga   **Jan - Dec 2022**
FullStack Laravel Developer

- Buildwithangga is a platform for programmers to learn various programming languages to be more advanced, be it frontend, backend or Full-Stack
- This platform provides various classes which consist of several videos on building an application (with certain cases)
- The classes I took included Full-stack Laravel, Full-stack Laravel with React, Full-stack Javascript

Dipa University   **Sept 2019 - Mar 2023**
Bachelor of Information Engineering

- Semester 7/7, Cumulative GPA 3.7.2/4.0.
- Thesis: Making a Sales Application using the Cross Selling method using the Apriori Algorithm (Case Study: Mitzuko Cosmetic Store)
